1.0.1 User Manual

Overview

Audio Merger provides eight channels of merging in a 1U device. Each merger has four inputs. In order to do this kind of merging with a Spider merger, it would take four devices and 2U of rack space. Audio Merger is perfect for the Polymodular System, which supports eight channels. And it has a cool Polymodular System logo.

Front Panel

LEDs

The LEDs show when an audio input has an active signal. There is an LED for each audio input.

Back Panel

Audio Mergers

The mergers sum the input signals into a single output signal. There are eight mergers, each with four inputs.
